## Project Case Study: Warradarge

### Description:

FairWind's first project in Australia, Warradarge faced immense obstacles due to the **Covid-19 pandemic**. However, in spite of these difficulties and the normal challenges associated with starting in a completely new market, the project was a success due to the flexibility and initiative shown by FairWind and our team.

An experienced core team of technicians and HSE personnel were sent from Europe in late 2019.

A few months later, the sudden announcement of **travel restrictions** related to the pandemic meant it was no longer possible to bring new technicians into Australia. Without the ability to rotate new technicians, the project was in jeopardy – so our team volunteered to stay until the project was completed, ensuring success.

The FairWind project team received praise from the client due to their dedication and professionalism.

### Project Name:

Warradarge

### Project Type:

Onshore Installation

### Customer:

Vestas

### Location:

Australia

### Execution Period:

December 2019 to  
August 2020
